Button placement issues on toolbar

12/21/2016 08:03 AM - Trel Smith

Status:	Closed	Start date:	12/21/2016
Priority:	Normal	Due date:

Target version:	2.7	Regression:	No
Operative System:	All		
Description			
I've run into the following two issues with the latest beta			
1. I cannot place any button on the tool bar in the right most position. The only way the button will appear is if I place it second most right and then reorder them.			
2. I removed the right aligned divider, and it appeared in the customize menu, but it cannot be interacted with in there to place it back on the bar.

Should be able to drag it from the customize bar into the Toolbar, I will look into it, you can reset the toolbar to default by typing [/toolbar -r](#), should restore the right divider as well.

Thanks this was a good find, I fixed so the right aligned divider can be drag/dropped and also changed it so if you drag a item on the Toolbar without being near another button, the dropped button will automatically be added to the left or right.
