Target version:	2.7	Regression:	No
Operative System:	All		
Description			
A way I found to replicate this			
(All window switching done in treebar)			
1. connect to freenode, and identify			
2. join a channel that requires you to be identified such as #android			
3. /quit			
4. From a different window, such as status /server irc.freenode.net			
5. You'll be unable to rejoin #android and it will bounce you to #android-unregistered			
6. Click the window in the tree bar for #android			
7. AdiIRC crashes
