Description

Hello,

It seems that the /did -e doesn't work into 'list' item when there is the 'disable' option set in the dialog setup options because after the dialog became in normal state the /did -e it doesn't seems to work under the "INIT" on dialog event, i will provide an short reproduce code to see.

Also when the dialog is in opening progress and i have set or in the dialog setup the 'disable' option or into any id the 'disable' option it should be opening the dialog or the id as disabled, as it doesn't now.

Test code:

```
dialog testing {
  title "test"
  size -1 -1 107 108
  option dbu disable
  list 3, 4 30 99 47, size vsbar disable
}
```

```
ON *:DIALOG:testing:*:*: {
  if ($devent == init) {
    did -a $dname 3 Test data
    did -e $dname 3
  }
}
```

- Thanks!
