#### Description

Hello,

A friend was running a code that made the AdiIRC to crash, but the crash window seems to looping and not only triggering 1 time, his operating system is Windows 7 64bits.

I tried that code and crashed me too, but the crash window triggered only 1 time, i am using Windows 10 latest version.

- Thanks!

#### History

##### #1 - 06/11/2018 04:01 PM - Per Amundsen

So where is the code?

##### #2 - 06/11/2018 04:06 PM - westor (GR)

there is not any code, just it should open only 1 crash window and under windows 7 64bits it's looping by opening more than 1.

##### #3 - 06/14/2018 01:08 AM - westor (GR)

This happened and to me, so it's not only Windows 7 problem, in some cases it looping the crashing window uppon crash.

##### #4 - 06/14/2018 01:23 AM - Per Amundsen

This has nothing to do with loops or windows versions.

When a bug report window is shown, it locks the main GUI thread for further input by the user, the /dns command spawns new threads, new threads can invoke the main GUI thread and add new bug report windows.

It's not really a bug, more like a side effect.
