Description

Hello,

I was trying to create a code in adiirc and saw that there is missing from AdiIRC something really wonderful related the DIALOGS and LIST thing, according to https://en.wikichip.org/wiki/mirc/dialog_components#List you can create a list with radio and check fields there, it would be nice to see that in AdiIRC supported too.

Options:

check = Turns the list into a list of checkbox items.

radio = Turns the list into a list of radio items.

Example Code:

```
; init alias
alias example {
    dialog -m example example
}
; dialog structure
dialog Example {
    title "Example"
    size -1 -1 100 110
    option dbu

    list 1, 10 10 80 20, multsel
    list 2, 10 40 80 20, radio
    list 3, 10 70 80 20, check

    button "Done", 7, 10 95 40 12, ok
}
on 1:dialog:example:init:*: {
    did -a example 1 Item A
    did -a example 1 Item B
    did -a example 1 Item C
    did -a example 2 Item A
    did -a example 2 Item B
    did -a example 2 Item C
    did -a example 3 Item A
    did -a example 3 Item B
    did -a example 3 Item C
}
```

Example Image:

- Status changed from New to Rejected

There is check support already, there is no radio list in .NET.
