

AdIRC - \$_ - # 9

Added in 1.9.0

`$?!N="message"`

Prompts the user for input and returns the result.

See also [\\$input](#).

Can be prefixed with # to ensure the resulted text starts with a channel prefix.

Parameters

* - Use a password Editbox.

! - Use a yes/no dialog which will return [\\$true](#) if user clicks yes, otherwise [\\$false](#).

= "message" - Message to display.

N - Try to use the Nth token as the result text.

Example

```
; Ask the user for his name and print the result.
//echo $?="What is your name?"

; Ask the user for his password and print the result.
//echo $?*="What is your password?"

; Ask the use to continue with a yes/no dialog.
//echo $?!="Do you want to continue?"

; Ask for the second token.
//tokenize 44 a,b,c | echo -ag Ths second token is $?2
```
