

## AdiIRC - \$asc - # 4

*Added in 1.9.0*

### **\$asc(C)**

Returns the [ASCII](#) value of the character C.

*Also see [\\$chr](#) for the reversed version.*

### **Parameters**

C - The character.

### **Example**

```
; Returns 65.  
//echo -ag $asc(A)
```

```
; returns 42  
//echo -ag $asc(*)
```
