

## AdiIRC - \$auto - # 1

Added in 3.1

### **\$auto**

Returns [\\$true](#) if auto-op is enabled, otherwise [\\$false](#).

Same as [\\$aop](#), see also [/aop](#).

---

### **\$auto(address|N)**

Returns any matching address in the auto-op list, or the Nth address.

#### **Parameters**

address - Address to match.

N - If N = 0, number of addresses, otherwise the Nth address.

#### **Properties**

.type - Returns the list of channels for this address.

.network - Returns the network name for this address.

#### **Example**

```
; Check if 'nick!ident@host' is in the auto-op list.  
//echo -g Auto op for nick!ident@host was $iif($auto(nick!ident@host), found, not found)
```
