

AdiIRC - \$avoice - # 2

Added in 3.1

\$avoice

Returns [\\$true](#) if auto-voice is enabled, otherwise [\\$false](#).

See also [/avoice](#).

\$avoice(address|N)

Returns any matching address in the auto-voice list, or the Nth address.

Parameters

address - Address to match.

N - If N = 0, number of addresses, otherwise the Nth address.

Properties

.type - Returns the list of channels for this address.

.network - Returns the network name for this address.

Example

```
; Check if 'nick!ident@host' is in the auto-voice list.  
//echo -g Auto voice for nick!ident@host was $iif($avoice(nick!ident@host), found, not found)
```
