

AdiIRC - \$bnick - # 4

Added in 1.9.4

\$bnick

Returns the banned/unbanned users nickname, however this would actually only be filled if the banmask itself includes a nickname. If the banmask does not include a nickname, [\\$bnick](#) is [\\$null](#).

This is only filled in the [on BAN](#) and [on UNBAN](#) event.

Example

```
on *:BAN:*:echo -ag The banned nick is $bnick
```

```
on *:UNBAN:*:echo -ag The unbanned nick is $bnick
```
