

AdiIRC - \$color - # 8

Added in 1.9.0

\$color(name/N)

Returns the Nth color index of the specified color name. If you do not specify the full name the first partial match is returned.

If you specify an N value, returns the RGB value for the Nth color box.

See also [/color](#), [\\$color](#), [Extra Colors](#).

Parameters

name/N - Named color or Nth color to retrieve.

Properties

.dd - Returns number in double-digit format.

.hex - Returns the color in RRGGBB hex format. (AdiIRC only)

Example

```
; Get the action color.
//echo -ag action color is $color(action)

; Get the action color by partial match in double digits.
//echo -ag action color is $color(act).dd

; Get the rgb value for color 5.
//echo -ag rgb value for 5 is $color(5)
```
