

AdiIRC - \$decrypt - # 8

Added in 1.9.0

\$decrypt(text, password)

Deprecated, consider using the [blowfish plugin](#). instead

Decrypts a blowfish text using the [fish10](#) format, encrypted with password.

ECB mode only.

See also [\\$encrypt](#).

Parameters

text - Text to decrypt.

password - Password to decrypt with.

Example

```
; Create a variable and encrypt text "Hello World" with password "test".  
var %text $encrypt>Hello World, test)
```

```
; Decrypt the text and print it.  
echo -ag $decrypt(%text, test)
```
