

AdiIRC - \$encrypt - # 9

Added in 1.9.0

\$encrypt(text, password)

Is not secure/accurate and is disabled in AdiIRC 3.3+, use the [blowfish plugin](#). instead

Encrypts a blowfish text using the [fish10](#) format using a password.

ECB mode only.

See also [\\$decrypt](#).

Parameters

text - Text to encrypt.

password - Password to encrypt with.

Example

```
; Create a variable and encrypt text "Hello World" with password "test".  
var %text $encrypt>Hello World, test)
```

```
; Decrypt the text and print it.  
echo -ag $decrypt(%text, test)
```
