

AdiIRC - \$envvar - # 8

Added in 1.9.6

\$envvar(name|N)

Returns environment variables.

Returns different variable values between 64 bit and 32 bit AdiIRC.

Properties

.name - Return name of the variable.

.value - Return value of the variable.

Parameters

name|N - Name of the variable, if N = 0, total number of variables, otherwise the Nth variable.

Example

```
; List number of variables.  
//echo -ag Number of variables is $envvar(0)  
  
; List the name of the 15th variable.  
//echo -ag The 15th variable is $envvar(15)  
  
; List the value of the 'APPDATA' variable.  
//echo -ag Value of APPDATA is $envvar(APPDATA)
```
