

AdiIRC - \$eval - # 1

Added in 1.9.0

\$eval(text,[N])

Evaluates the contents of text N times.

Same as [\\$](#)

Parameters

text - The text to evaluate.

[N] - If N is not specified, the default is N = 1. If N is zero, text is not evaluated.. (optional)

Example

```
; Evaluate 0 times.  
//echo -ag $eval($ $+ me, 0)
```

```
; Evaluate 1 time.  
//echo -ag $eval($ $+ me)
```

```
; Evaluate 2 times.  
//echo -ag $eval($ $+ me, 2)
```
