

AdiIRC - \$evalnext - # 1

Added in 1.9.3

\$evalnext(text)

Evaluates the contents of text 2 times.

Same as [\\$eval\(text,2\)](#) [\\$\(text,2\)](#)

Parameters

text - The text to evaluate.

Example

```
; Evaluate 2 times.  
//echo -ag $evalnext($ $+ me)
```
