

AdiIRC - \$file - # 6

Added in 1.8.10

\$file(filename|foldername)

Returns information about the specified file or folder.

Default returns file size.

Same as [\\$lof](#).

Parameters

filename|foldername - Filename or folder to retrieve information from.

Properties

- .size - File size in bytes. (returns 0 for folders)
- .ctime - Creation time. (unix timestamp)
- .mtime - Last modification time. (unix timestamp)
- .atime - Last access time. (unix timestamp)
- .shortfn - Short file name.
- .longfn - Full file name.
- .attr - File attributes.
- .sig - Returns "ok" if digital signed, else "none".
- .version - Returns the file version, if any.
- .path - The path directory.
- .name - The filename without the file extension.
- .ext - The file extension.

Example

```
; Show AdiIRC.exe filesize
//echo -ag $file($adiircexe).size

; Show explorer.exe digital signature
//echo -ag $file(c:\windows\explorer.exe).sig
```
