

AdiIRC - \$filename - # 5

Added in 1.9.9

\$filename

Returns the filename that was transmitted during [on FILESENT](#), [on FILERCVD](#), [on SENDFAIL](#) or [on GETFAILevent](#) or played during a [on MP3END](#), [on MIDIEND](#), [on WAVEEND](#), [on SONGEND](#), [on PLAYEND](#).

It is also available in the [on CTCP](#) event for DCC transfers.

Example

```
on *:FILERCVD:*:echo -ag file recieved from $nick was $filename
```

```
on *:FILESENT:*:echo -ag file sent to $nick was $filename
```

```
on *:MP3END:*:echo -ag last file played was $filename
```
