

## AdiIRC - \$fopen - # 5

Added in 1.9.0

### **\$fopen(name|N)**

Returns information about an open file.

#### **Parameters**

name|N - Name of an open file, If N = 0 number of open files, otherwise the Nth open file.

#### **Properties**

.fname - Returns the name associated with the file.  
.pos - Returns the current position in the file.  
.eof - Returns [\\$true](#) if the position is as the end of the file, otherwise [\\$false](#).  
.err - **TODO**  
.line - Returns the current line position. (**AdiIRC only**)

#### **Example**

```
; Open a file.  
/fopen Example Example.txt  
  
; Print number of open files.  
//echo -ag $fopen(0)  
  
; Print information about the 'Example' file.  
//echo -ag $fopen(Example) position is $fopen(Example).pos  
  
; Close the file.  
/fclose Example
```
