

AdiIRC - \$get - # 5

Added in 2.3

\$get(N/nick,[N])

Returns the nickname and filename of the Nth dcc get connection.

Parameters

N/nick - Nick or the Nth connection.

[N] - The Nth nick match.

Properties

.wid - **TODO**

.hwnd - **TODO**

.cid - Returns the connection id.

.path - Returns the file path.

.file - Returns the file name.

.size - Returns the file size in bytes.

.rcvd - Returns the number of bytes received.

.pc - Returns the percent complete.

.secs - Returns number of seconds the transfer has been open.

.done - Returns [\\$true](#) if transfer was successful, otherwise [\\$false](#).

.resume - Returns resume position if file was resumed.

.cps - Returns a estimate bytes per second.

.status - Returns "sent" and "failed" if a transfer has been sent successfully or failed.

.ip - Returns the remote ip address.

.port - Returns the remote port. (**AdiIRC only**)

Example

```
; Print number of GET transfers.  
//echo -ag $get(0)
```

```
; Print filename for the first GET transfer.  
//echo -ag $get(1).file
```
