

AdiIRC - \$gfx - # 3

Added in 1.6

\$gfx

Returns the name of the first graphics card found.

Might not be the default graphics card.

gfx(N)

Returns the name of the Nth graphics card found.

Parameters

N - If N = 0, number of graphics cards, otherwise the Nth graphics card.

Example

```
; Print number of graphics cards.  
//echo -ag $gfx(0)
```

```
; Print the name of the first graphics cards.  
//echo -ag $gfx(1)
```
