

AdiIRC - \$group - # 6

Added in 1.9.0

\$group(#|N)

Returns the name or status of a [scripting group](#) in a script.

See also [/enable](#), [/disable](#).

Parameters

#|N - Group name or if N = 0, number of groups, otherwise the Nth group.

Properties

.status - Returns on or off.
.fname - Returns the script filename in which the group exists.
.name - Returns name of the group.
.line - Line in the script where the group starts. **(AdiIRC only)**

Examples

```
; Create a group.
#example on
alias Example {
    echo -ag Group works
}
#example end

; Print number of groups.
//echo -ag $group(0)

; Print the '#example' group status.
//echo -ag #example1 is $group(#example1).status

; Disable the '#example' group
/disable #example

; Print the '#example' group status again.
//echo -ag #example1 is $group(#example1).status
```
