

AdiIRC - \$height - # 1

Added in 1.9.1

\$height(text,font,size)

Returns height of text in pixels for the specified font.

If you use a negative number for the font size, it will match the size of fonts in the font dialogs.

Parameters

text - Text to measure.

font - Font to measure.

size - Font size to measure.

Example

```
; Measure the height of text 'Hello World' using font 'Verdana 9'.  
//echo -ag $height(Hello world, Verdana, 9)
```
