

## AdiIRC - \$iel - # 2

*Added in 1.9.0*

### **\$iel(#channel,N)**

Returns Nth item in the internal exception list.

### **Parameters**

#channel - The channel to retrieve exception list from.

N - If N = 0, total number of exceptions, otherwise the Nth exception.

### **Properties**

.by - The nick who set the exception.

.ctime - The time the exception was set in unix timestamp format.

.date - The time the exception was set in mmm oo HH:mmtt format.

.secs - Number of seconds until exception expire (if set to expire).

### **Example**

```
; Get number of exceptions.  
//echo -ag $iel(#channel, 0)
```

```
; Get information about the first exception.  
//echo -ag $iel(#channel, 1) set by $iel(#channel, 1).by set at $iel(#channel, 1).date
```
