

## AdiIRC - \$ini - # 4

Added in 1.9.0

### **\$ini(file,topic|N,[item|N])**

Returns the name/Nth position of the specified topic/item in an INI/text file.

See also [\\$readini](#).

Same as [\\$initopic](#).

### **Parameters**

file - File to read from.

topic|N - Topic or the Nth topic, if N = 0 number of topics, otherwise the Nth topic.

[item|N] - Item or the Nth item, if N = 0 number of item, otherwise the Nth item. (optional)

### **Examples**

```
; Print number of topics in '$adiircini'.
```

```
//echo -ag $ini($adiircini,0)
```

```
; Print the name of the first topic in '$adiircini'.
```

```
//echo -ag $ini($adiircini,1)
```

```
; Check if the topic 'Messages' exists.
```

```
//echo -ag $ini($adiirc,Messages)
```
