

AdiIRC - \$insert - # 2

Added in 1.8.10

\$insert(text, token, N)

Insert token into text after position N.

Parameters

text - Text to insert to.

token - Token to insert.

N - Position in text to insert the token after.

Resulting string has N characters of 'text', followed by 'token', followed by the remainder of 'text'

Example

```
; Insert 'wo' at position 6.  
//echo -ag $insert(hello rld, wo, 6)  
//var %string hello rld , %pos 6 , %new wo | echo -ag $insert(%string, %new , %pos) same as $left  
(%string,%pos) $+ %new $+ $mid(%string,$calc(1+%pos))
```
