

## AdiIRC - \$iptype - # 2

*Added in 1.9.3*

### **\$iptype(text)**

Returns "ipv4" or "ipv6" if text is is a valid IP address format.

### **Parameters**

text - The text to validate.

### **Properties**

-expand - Expand a ipv6 address.

.compress - Compress a ipv6 address.

### **Example**

```
; Check a IPv4 address.
```

```
//echo -ag 8.8.8.8 is $iptype(8.8.8.8)
```

```
; Check a IPv6 address.
```

```
//echo -ag FE80:0000:0000:0000:0202:B3FF:FE1E:8329 is $iptype(FE80:0000:0000:0000:0202:B3FF:FE1E:8329)
```
