

AdiIRC - \$iql - # 2

Added in 2.7

\$iql(#channel,N)

Returns Nth item in the internal quiet list.

Parameters

#channel - The channel to retrieve quiet list from.

N - If N = 0, total number of quiets, otherwise the Nth quiet.

Properties

.by - The nick who set the quiet.

.ctime - The time the quiet was set in unix timestamp format.

.date - THE time the quiet was set in mmm oo HH:mmtt format.

.secs - Number of seconds until exception expire (if set to expire).

Example

```
; Get number of quiet.
```

```
//echo -ag $iql(#channel, 0)
```

```
; Get information about the first quiet.
```

```
//echo -ag $iql(#channel, 1) set by $iql(#channel, 1).by set at $iql(#channel, 1).date
```
