

AdiIRC - \$isalias - # 8

Added in 1.9.0

\$isalias(name, [N])

Returns [\\$true](#) if the specified name is an alias command that exists in your aliases or scripts, otherwise [\\$false](#).

Parameters

name - The alias to find.

[N] - If N = 0, number of lines for the alias, otherwise the Nth alias line. (optional)

Properties

.line - Returns the line in the file where the alias is defined. **(AdiIRC only)**

.fname - Returns the path and filename of the found alias.

.alias - Returns the Nth line of the alias.

.ftype - Returns "alias" if the alias is found in an alias file, otherwise "remote".

Example

```
; Create an alias
alias example {
    ; Check if /example2 is an alias
    //echo -ag $isalias(example2)

    ; Returns the code of the /example2 alias "-l example2 { echo -ag Hello World }"
    //echo -ag $isalias(example2).alias
}

; Create a second alias
alias -l example2 { echo -ag Hello World }
```
