

AdiIRC - \$istok - # 5

Added in 1.9.0

\$istok(text,token,C)

Returns [\\$true](#) if token exists in text, otherwise returns [\\$false](#).

[\\$istok](#) is case-insensitive, see [\\$istokcs](#) for a case-sensitive version.

Parameters

text - The text to tokenize.

token - The token to check.

C - The [ASCII](#) value to tokenize by.

Example

```
; Check if 'b' is a token in 'a.b.c.d'  
//echo -ag $istok(a.b.c.d, b, 46)
```
