

## AdiIRC - \$longfn - # 3

*Added in 1.9.0*

### **\$longfn(filename)**

Returns the [long version](#) of a short filename.

### **Parameters**

filename - The filename.

### **Example**

```
alias Example {  
    ; Get the shortfn of AdiIRC.exe  
    var %short $shortfn($adiircexe)  
  
    ; Print the long filename  
    echo -ag $longfn(%short) vs %short  
}
```
