

AdiIRC - \$loop - # 2

Added in 1.9.7

\$loop(N, M, text)

Starts a loop from 'N' to 'M' and executes 'text' with \$1 and \1 as the current number and returns a space separated text from the result of 'text'.

\1 is replaced with \$+ \$1 \$+.

Parameters

N - Starting number.

M - End number. (N + M = end)

text - The identifier(s) to execute.

Example

```
; Return a list of all nicks in the channel
//echo -ag $loop(1, $nick(#, 0), $nick(#, \1))

; Whois all nicks in a channel
alias iwhois {
    whois $1
}
//noop $loop(1, $nick(#, 0), $iwhois($nick(#, \1)))
```
