

AdiIRC - \$menu - # 3

Added in 1.9.1

\$menu

Returns the name of the associated window in a [menu](#) event.

See also [\\$menutype](#), [\\$menucontext](#), [\\$mouse](#), [Menus](#).

Example

```
menu @Example {  
  Menu Name:echo -ag Menu name is $menu  
  Menu Type:echo -ag Menu type is $menutype  
  Menu Context:echo -ag Menu context is $menucontext  
}
```
