

AdiIRC - \$play - # 6

Added in 3.2

\$play([nick|channel,]N)

Returns information about the [/play](#) queue.

See also [/play](#), [\\$pnick](#).

Parameters

nick|channel - The nick or channel where the file is playing.

N - If N = 0, number of playing files, otherwise the Nth playing file.

Properties

type - Returns the type of the request, "topic" if you are using /play -t, otherwise "file".

.fname - Returns the complete filename used for the play request.

.topic - Returns the name of the topic if you used /play -t.

.pos - Returns the number of the line that play request is at, (the next line to be played).

.lines - Returns the total number of lines in the file being played.

.delay - Returns the delay used for the play request (default to 1000).

.status - Returns the status of the play request, "playing" or "queued".

Example

```
; Print the filename of the current playing file.  
//echo -ag $play(1).fname
```

```
; Print the filename of first queued file matching channel '#chan'.  
//echo -ag $play(#chan, 1).fname
```
