

AdiIRC - \$pos - # 3

Added in 1.8.10

\$pos(string,substring,N)

Returns a number indicating the position of the Nth occurrence of string in text.

[\\$pos](#) is case-insensitive, see [\\$poscs](#) for case-sensitive version.

Parameters

string - String to search.

substring- Substring to search.

N - If N = 0, total number of matches, otherwise the Nth match.

Example

```
; Print number of matches for the substring 'e'.  
//echo -ag $pos(hello there,e,1)
```

```
; Print the position of the second match using substring 'e'.  
//echo -ag $pos(hello there,e,2)
```
