

AdiIRC - \$r - # 2

Added in 1.9.0

\$r(v1,v2)

Returns a random number or letter between v1 and v2.

Same as [\\$rand](#).

See also [\\$rand](#).

Parameters

v1 - Start number or letter [0-9A-Za-z].

v2 - End number or letter [0-9A-Za-z].

Example

```
; Get a random number between 10 and 100.  
//echo -ag $r(10,100)
```

```
; Get a random letter between g and y.  
//echo -ag $r(g,y)
```
