

AdiIRC - \$remtok - # 3

Added in 1.9.0

\$remtok(text,token,N,C)

Removes the Nth matching token from text.

[\\$remtok](#) is case-insensitive, see [\\$remtokcs](#) for case-sensitive version.

Parameters

text - The text to tokenize.

token - Token to remove.

N - If N = 0, all matching tokens, otherwise the Nth token.

C - The [ASCII](#) value to tokenize by.

Example

```
; Remove the first 'b' token.  
//echo -ag $remtok(a.b.c.d,b,1,46)
```

```
; Remove all 'b' tokens.  
//echo -ag $remtok(a.b.b.b,b,0,46)
```
