

## AdiIRC - \$replace - # 1

*Added in 1.8.10*

**\$replace(string,substring,newstring,...)**

Replaces any occurrence of substring in string with newstring.

[\\$replace](#) is case-insensitive, see [\\$replacecs](#) for case-sensitive version.

### Parameters

string - The string to search.

substring - The substring to replace.

newstring - The new string to replace with.

... - Additional substrings to replace.

### Example

```
; Replace all occurrences of 'cd' in the string with 'xyz'.  
//echo -ag $replace(abcdefg,cd,xyz)
```

```
; Remove all occurrences of 'a', 'b', 'c', 'd' in the string with 'A', 'B', 'C', 'D'.  
//echo -ag $replace(abcdefg,a,A,b,B,c,C,d,D)
```
