

## AdiIRC - \$replacecs - # 1

Added in 1.8.10

**\$replacecs(string,substring,newstring,...)**

Replaces any occurrence of substring in string with newstring.

[\\$replacecs](#) is case-sensitive, see [\\$replace](#) for case-insensitive version.

### Parameters

string - The string to search.

substring - The substring to replace.

newstring - The new string to replace with.

... - Additional substrings to replace.

### Example

```
; Replace all occurrences of 'CD' in the string with 'XYZ'.
```

```
//echo -ag $replacecs (abcdCDefg,CD,XYZ)
```

```
; Remove all occurrences of 'a', 'b', 'c', 'd' in the string with 'A', 'B', 'C', 'D'.
```

```
//echo -ag $replacecs (aAbBcCdDeEfFgG,a,A,b,B,c,C,d,D)
```
