

AdiIRC - \$token - # 2

Added in 1.9.1

\$token(text,N,C)

Returns the Nth token in text.

Same as [\\$gettok](#).

*N-N2 can be used to get a range of tokens, both numbers can be negative.
N- can be used to get all tokens from position N.*

Parameters

text - The text to tokenize.

N - The Nth token to get.

C - The [ASCII](#) value to tokenize by.

Example

```
; Print the 3rd token in 'a.b.c.d.e'  
//echo -ag $token(a.b.c.d.e,3,46)
```

```
; Print the second to forth token in 'a.b.c.d.e'.  
//echo -ag $token(a.b.c.d.e,2-4,46)
```

```
; Print all tokens from the second position.  
//echo -ag $token(a.b.c.d.e,2-,46)
```
