

AdiIRC - \$url - # 4

Added in 1.9.3

\$url

Returns the currently active URL in your Web Browser.

Only works for Internet Explorer/Opera 12, does not work in any modern browser due to [DDE](#) support being removed.

\$url(N)

Returns the Nth captured URL address in URL catcher.

Parameters

N - If N = 0, number of URL addresses, otherwise the Nth URL address.

Propertes

.desc - **TODO**
.group - **TODO**

Example

```
; Print number of caught URL addresses.  
//echo -ag $url(0)
```

```
; Print the first caught URL address.  
//echo -ag $url(1)
```
