

## AdiIRC - \$wildtokcs - # 3

Added in 1.9.0

### **\$wildtokcs(text,wildstring,N,C)**

Returns the Nth token that matches the [wildcard](#) string.

[\\$wildtokcs](#) is case-sensitive, see [\\$wildtok](#) for case-insensitive version.

### **Parameters**

text - The text to tokenize.

wildstring - String to search.

N - If N = 0, return number of matching tokens, otherwise the Nth token.

C - The [ASCII](#) value to tokenize by.

### **Example**

```
; Prints the number of matches from the wildstring 'T*'.  
//echo -ag $wildtokcs(one two Three, T*, 0, 32)
```

```
; Prints the first match from the wildstring 'T*e'.  
//echo -ag $wildtokcs(one two Three, T*e, 1, 32)
```
