

## AdiIRC - \$wmiquery - # 10

Added in 1.9.7

### **\$wmiquery([path], query, [N], N|key)**

Performs a [WMI](#) query and return the Nth value.

#### **Parameters**

[path] - Optional path.

query - Query to perform.

[N] - If 0, numbers of results else the Nth value (optional, default is 1)

N|key - The key to get or the Nth key.

#### **Properties**

.key - Returns the name of the Nth key if N|key is a number.

#### **Example**

```
; Prints the cpu l2 cache  
//echo -ag l2 cache is $wmiquery(SELECT * FROM Win32_Processor, L2CacheSize)
```
