

## Addressbook Control

Allows performing auto-op, auto-voice and protect on matching hostnames/addresses on specific channels/networks.

See also [/aop](#), [/avoice](#), [/protect](#), [\\$aop](#), [\\$avoice](#), [\\$protect](#).

### Enable

Enables or disabled auto-op/auto-voice.

### Op dropdown

Select the auto-op list.

### Voice dropdown

Select auto-voice list.

### Protect dropdown

Select protect list.

### Add

Add a new hostname/address to the selected auto list.

[Add/Edit Address](#)

### Edit

Edit a hostname/address in the selected auto list.

[Add/Edit Address](#)

## Delete

Delete a hostname/address from the selected auto list.

## Up

Move the selected hostname/addresses up in the selected auto list.

## Down

Move the selected hostname/addresses down in the selected auto list.

## Sort

Sort the hostname/addresses in the selected auto list alphabetically.
