

Backgrounds Options

Most of these options can also be toggled with the [/background](#) command.

The Image Layout dropdown allows setting various layouts for the background image, default is usually Stretch.

Main

Sets the background image for the [MDI area](#) (the area behind the window shown when a docked window is unmaximized)

Channel

Sets the background image for the textarea for Status/Channel/Query/Chat windows. (somewhat misleading name).

Menubar

Sets the background image for the Menubar.

Toolbar

Sets the background image for the Toolbar.

Toolbar Buttons

Sets the background image for all Toolbar buttons which is not a [picture window](#).

Switchbar

Sets the background image for the Switchbar.

Switchbar buttons

Sets the background image for all Switchbar buttons.

Treebar

Sets the background image for the Treebar.

Disabled for now.

Nicklist

Sets the background image for all Nicklist's except [custom window](#).

Statusbar

Sets the background image for the Statusbar.

Use (fake) transparent windows

When this option is enabled, the textarea of all status/channel/query/chat windows will be transparent down to the MDI area behind the window.

If the MDI area have a background image, the window will show a portion of this background image relative to the window location and size, else it will show the MDI area background color.

8CtMV5z.jpg

Use (fake) transparent main window

When this option is enabled, the MDI area will try to get the windows background image or color and use this as it's background,

If both the transparent main window and transparent windows option is enabled, it gives the illusion of transparency to the desktop.

6nboDf7.png

Use (fake) transparent nicklist

When this option is enabled, nicklist of all channel windows will be transparent down to the MDI area behind the window.
