

AdiIRC - Breplace - # 4

Added in 1.9.0

/breplace <&binvar> <oldvalue> <newvalue> [oldvalue newvalue...]

Replaces all matching [ASCII](#) values in &binvar with new values.

Multiple values can be replaced by adding more old/new parameters.

Parameters

<&binvar>- The &binvar to modify.

<oldvalue> - [ASCII](#) value to replace.

<newvalue> - [ASCII](#) value to insert.

Example

```
alias example {  
    ;Create a binary variable set it to "Hello World"  
    bset -t &Example 1 Hello World  
  
    ;Replace e (ASCII value 101) with 3 (ASCII value 51)  
    breplace &Example 101 51  
  
    ;Echo our new string  
    echo -a $bvar(&Example,1,$bvar(&Example,0)).text  
}
```
