

AdiIRC - Didtok - # 5

Added in 1.9.0

/didtok <name> <id> <c> <text>

Tokenizes a string by character c, then adds the result to a dialog list/combo/edit box.

Parameters

<name> - Name of the dialog.

<id> - Id of the dialog control.

<c> - [ASCII](#) value to tokenize by.

<text> - Text to tokenize.

Example

```
; Dialog table layout.
dialog colors {
    size -1 -1 100 200
    list 1, 10 10 80 180
}
```

```
; Run the dialog.
/dialog -m colors colors
```

```
; Tokenize the string "red blue orange yellow" by whitespace and insert result into the list control.
/didtok colors 1 32 red blue orange yellow
```
