

AdiIRC - Dns - # 9

Added in 1.5

/dns [-46ch] <nick|address>

Resolves an ip address/hostname or nick to a ip address/hostname.

See also [\\$dns, on DNS](#).

Same as [/resolve](#).

Switches

- 4 - Include ipv4 addresses.
- 6 - Include ipv6 addresses.
- c - Clears all queued dns queries.
- h - Force <nick|address> to be a address.
- a - Print all ip addresses found if input was a hostname. **(AdiIRC only)**

Parameters

<nick|address> - The nick or address to lookup.

Example

```
; Lookup nick.  
/dns Nick  
  
; Lookup only ipv4 results.  
/dns -4 Nick  
  
; Lookup only ipv6 results.  
/dns -6 Nick  
  
; Lookup ip address 8.8.8.8  
/dns 8.8.8.8  
  
; Lookup google.com  
/dns google.com  
  
; Lookup nick!ident@host.com (host.com will be extracted)  
/dns nick!ident@host.com
```
