

## AdiIRC - Drawline - # 4

*Added in 1.9.0*

**/drawline [-ihnr] <@window> <color> <size> <x y> <x y> [<x y>...]**

Draws a line from the first <x y> co-ordinate to the second, if more co-ordinates are specified, the line is continued.

### Switches

- i - Draws in inverse mode.
- h - Highlights the windows icon if it is minimized.
- n - Prevents the display from being updated immediately.
- r - Indicates that the color is in RGB format. You can use [\\$rgb\(N,N,N\)](#) to create an RGB value.

### Parameters

- <@window> - The picture window to draw in.
- <color> - Color of the line to draw.
- <size> - Size of the line to draw.
- <x y> - x,y co-ordinates to draw at.
- [<x y>...] - Additional points to draw.
