

AdiIRC - Drawtext - # 6

Added in 1.9.0

```
/drawtext -hnrpbocvd <@window> <color> [color] [fontname fontsize] <x y [w h]> <text|&binvar>
```

Draws text at the specified co-ordinates.

Switches

- p - Processes and interprets control codes in the text.
- b - Indicates that you have specified the second color parameter as the background color for the text.
- o - Indicates specified font should be in bold.
- c - Indicates that you have specified the [w h] values as the rectangle in which text should be printed. Text will be clipped if it extends beyond this rectangle.
- h - Highlights the windows icon if it is minimized.
- n - Prevents the display from being updated immediately.
- r - Indicates that the colors are in [\\$rgb](#) format.
- v - Indicates &binvar is specified.
- d - TODO

Parameters

<@window> - Name of the window to draw.

<color> - The textcolor.

[color] - The background color, if -b has been specified.

[fontname fontsize] - The name of the font and the size of the font.

<x y [w h]> - The coordinate of the text.

<text|&binvar> - The text or text from a &binvar to draw.

Example

```
alias testdrawtext {  
  window -p @win  
  drawtext @win 4 Verdana 11 0 0 Hello World  
}
```
